

WEBSITE AUDIT REPORT

www.spronta.com

https://www.spronta.com

Audited 2026-09-14 12:34 UTC

20 pages checked

Technical Health

AI Search Readiness

Accessibility

Overall, this website is in **good shape**. 225 issues were found across 20 pages checked — 1 of them is high priority. Full detail, including every affected page, follows below.

On the plus side, this audit also confirmed 7 things the site is already doing right.

Detailed Findings

Every issue found, ranked by priority, with every affected page listed.

CRITICAL Broken Link Links

1 page

A link on this page points to a URL that returns an error. Broken links erode trust, waste crawl budget, and send users and bots to dead ends.

What to do: Fix the link target, update it to the correct URL, or remove the link. Re-check periodically as external targets change.

If left as-is: Poor user experience and leaked link equity into broken destinations.

AFFECTED PAGE

DETAIL

https://www.spronta.com/change-log/

404 → https://blog.google/products/search/google-search-news-topic-authority/

IMPORTANT**Images Missing Alt Text**

Images

2 pages

Alt text describes images to screen-reader users and to search engines (powering image search). Missing alt hurts accessibility and discoverability.

What to do: Add concise, descriptive alt attributes to meaningful images; use empty alt="" for purely decorative ones.

If left as-is: Accessibility failures and lost image-search traffic.

AFFECTED PAGE	DETAIL
https://www.spronta.com/ai-prompt-library/	3 of 3 images
https://www.spronta.com/changelog/	1 of 7 images

IMPORTANT**Title Too Long**

Titles & Meta

2 pages

Titles over ~60 characters get truncated in search results, hiding the end of your message and reducing click-through.

What to do: Tighten the title to under ~60 characters, front-loading the most important words.

If left as-is: Truncated, less compelling search snippets.

AFFECTED PAGE	DETAIL
https://www.spronta.com/blog/best-ai-tools-for-seo/	75 chars
https://www.spronta.com/blog/content-qa-checklist/	66 chars

This structured-data item omits properties Google recommends. The rich result can still appear, but recommended fields make it richer and more competitive (ratings, dates, images, authorship).

What to do: Add the recommended properties where they apply (e.g. aggregateRating and brand on a Product, datePublished and author on an Article) to strengthen the listing.

If left as-is: A thinner rich result that may lose to more complete competitors.

Without X-Content-Type-Options: nosniff, browsers may MIME-sniff responses and execute disguised content as script.

What to do: Send X-Content-Type-Options: nosniff on every response — it's a one-line server config.

If left as-is: MIME-sniffing attacks against your users become possible.

Without a CSP header, the browser will execute any script injected into the page — your main defence against XSS is missing.

What to do: Add a Content-Security-Policy header, starting with a report-only policy and tightening from there.

If left as-is: No browser-level protection against cross-site scripting.

Without X-Frame-Options (or CSP frame-ancestors), any site can embed your pages in an iframe and run clickjacking overlays on them.

What to do: Send X-Frame-Options: SAMEORIGIN, or the modern equivalent CSP frame-ancestors directive.

If left as-is: Your pages can be framed and clickjacked by malicious sites.

Without a Referrer-Policy, browsers may send full URLs (including query parameters) to every site you link to, leaking paths, tokens, and user data.

What to do: Send Referrer-Policy: strict-origin-when-cross-origin (the modern default) or stricter.

If left as-is: URL data leaks to third-party sites in the Referer header.

One or more images on this page exceed 100 KB. Heavy images are the most common cause of slow LCP and wasted mobile data.

What to do: Compress and resize images to their display size, serve next-gen formats (WebP/AVIF), and lazy-load below-the-fold images.

If left as-is: Slower loads, worse Core Web Vitals, higher bounce on slow connections.

AI answer engines extract concise answers that sit directly under a clear heading. Pages that bury the answer in long prose are harder to quote.

What to do: Lead each section with the direct answer in the first sentence after the heading, then elaborate. Use question-style headings.

If left as-is: Passed over by AI engines in favour of more extractable competitors.

AFFECTED PAGE	DETAIL
https://www.spronta.com/ai-prompt-library/

https://www.spronta.com/changelog/0.4.2/	

The page scores as difficult on the Flesch reading-ease scale — long sentences and heavy vocabulary. Most web audiences (and featured-snippet extraction) favour clearer writing.

What to do: Shorten sentences, prefer common words, and break dense paragraphs into lists and subheadings.

If left as-is: Higher bounce rates and weaker snippet/AI-answer extraction.

AFFECTED PAGE	DETAIL

https://www.spronta.com/changelog/0.4.2/	Flesch score 47

Heading levels jump down by more than one (e.g. an h2 followed by an h4), breaking the document outline screen-reader users navigate by. Headings should describe structure, not be chosen for their visual size.

What to do: Use heading levels in order without skipping (h1 → h2 → h3). Style headings with CSS if you need a different visual size, rather than picking a level for its appearance.

If left as-is: The page outline is broken, making heading navigation confusing (WCAG 1.3.1).

AFFECTED PAGE	DETAIL
https://www.spronta.com/	
https://www.spronta.com/changelog/0.4.0/	
https://www.spronta.com/changelog/0.2.0/

https://www.spronta.com/changelog/0.5.1/	
https://www.spronta.com/changelog/0.4.1/	
https://www.spronta.com/changelog/0.4.2/	

Very short titles waste valuable space in the search result and often omit useful keywords searchers use.

What to do: Expand the title to ~30–60 characters with descriptive, keyword-relevant wording.

If left as-is: Missed keyword relevance and weaker click-through.

AFFECTED PAGE	DETAIL

https://www.spronta.com/changelog/0.4.2/	14 chars

MINOR

Meta Description Too Long

Titles & Meta

8 pages

Descriptions beyond ~160 characters are truncated, cutting off your call to action.

What to do: Trim to ~70–160 characters and put the key message first.

If left as-is: Truncated snippets with weaker messaging.

AFFECTED PAGE	DETAIL
https://www.spronta.com/blog/state-of-webmcp-july-2026/	186 chars
https://www.spronta.com/blog/best-ai-tools-for-seo/	203 chars
https://www.spronta.com/author/sean-ryan/	174 chars
https://www.spronta.com/	195 chars
https://www.spronta.com/blog/content-qa-checklist/	189 chars
https://www.spronta.com/blog/cheap-seo-tools/	233 chars
https://www.spronta.com/blog/introducing-spronta-cloud/	216 chars
https://www.spronta.com/changelog/0.4.0/	167 chars

MINOR

No H2 Headings

Headings

3 pages

A long page with no H2s is a wall of text: harder for users to scan, and harder for search and AI engines to extract sections and answers from.

What to do: Break the content into logical sections with descriptive H2 subheadings.

If left as-is: Lower engagement and weaker extraction by search/AI engines.

AFFECTED PAGE	DETAIL
https://www.spronta.com/changelog/0.4.0/	606 words without an H2
https://www.spronta.com/changelog/0.3.0/	688 words without an H2
https://www.spronta.com/changelog/0.5.1/	617 words without an H2

MINOR

Images Missing Dimensions

Performance

2 pages

Images without width/height attributes force the browser to reflow the layout as each one loads — the main cause of Cumulative Layout Shift (a Core Web Vital).

What to do: Add explicit width and height attributes (or CSS aspect-ratio) so the browser reserves space before the image loads.

If left as-is: Layout jank and a worse CLS score.

AFFECTED PAGE	DETAIL
https://www.spronta.com/blog/state-of-webmcp-july-2026/	3 of 4 images without width/height
https://www.spronta.com/changelog/	6 of 7 images without width/height

MINOR

Meta Description Too Short

Titles & Meta

1 page

Very short descriptions under-use the snippet space and rarely persuade the searcher.

What to do: Expand to ~70–160 characters with a clear summary and benefit.

If left as-is: Under-leveraged search real estate.

AFFECTED PAGE	DETAIL
https://www.spronta.com/changelog/0.4.2/	46 chars

MINOR

H1 Too Long

Headings

1 page

An H1 past ~70 characters stops being a headline and starts being a paragraph — harder to scan for users and a muddier topical signal for engines.

What to do: Tighten the H1 to a crisp statement of the page's topic; move the detail into the intro copy.

If left as-is: Weaker scannability and diluted topical focus.

AFFECTED PAGE	DETAIL
https://www.spronta.com/	85 chars

Broken Links
