Audited 2026-09-14 12:49 UTC

11 pages checked

Technical Health

AI Search Readiness

Accessibility

● Needs some work

We checked 11 pages on this website and found 200 issues that could be affecting how easily customers and search engines find it. None of these are urgent, but they're still worth fixing.

On the plus side, this audit also confirmed 4 things the site is already doing right.

11

PAGES CHECKED

200

ISSUES FOUND

0

URGENT

4

WORKING WELL

A complete, page-by-page breakdown of every issue — including exactly which pages are affected — starts on the next page.

Detailed Findings

Every issue found, ranked by priority, with every affected page listed.

IMPORTANT

Duplicate Title

Titles & Meta

11 pages

Multiple pages share the same title, so search engines struggle to tell them apart and may pick the wrong one to rank.

What to do: Give every page a unique title that reflects its specific content.

If left as-is: Keyword cannibalisation and diluted ranking signals.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	
https://www.roofingrepairguy.com/	
https://www.roofingrepairguy.com/locations/	
https://www.roofingrepairguy.com/terms-of-use/	
http://www.roofingrepairguy.com/daly-ca/

https://www.roofingrepairguy.com/about-us/	
https://www.roofingrepairguy.com/privacy-policy/	
https://www.roofingrepairguy.com/testimonials-disclosure/	
https://www.roofingrepairguy.com/linking-policy/	
https://www.roofingrepairguy.com/contact-us/	

Titles over ~60 characters get truncated in search results, hiding the end of your message and reducing click-through.

What to do: Tighten the title to under ~60 characters, front-loading the most important words.

If left as-is: Truncated, less compelling search snippets.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	140 chars
https://www.roofingrepairguy.com/	140 chars
https://www.roofingrepairguy.com/locations/	140 chars

https://www.roofingrepairguy.com/linking-policy/	140 chars
https://www.roofingrepairguy.com/contact-us/	140 chars

An HTTPS page is loading resources over insecure HTTP. Browsers block or warn on mixed content, breaking layout and eroding the security guarantee.

What to do: Update all resource URLs (images, scripts, styles) to HTTPS, or use protocol-relative/upgrade-insecure-requests.

If left as-is: Broken assets and browser security warnings.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	2 insecure resources
https://www.roofingrepairguy.com/	2 insecure resources
https://www.roofingrepairguy.com/locations/	2 insecure resources
https://www.roofingrepairguy.com/terms-of-use/	2 insecure resources

https://www.roofingrepairguy.com/contact-us/	2 insecure resources

IMPORTANT**Missing Meta Description**

Titles & Meta

8 pages

The meta description is your ad copy in search results. Without one, engines auto-generate a snippet from page text, often unappealing.

What to do: Write a unique, compelling 70–160 character description that summarises the page and invites the click.

If left as-is: Lower click-through from search results.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/locations/	
https://www.roofingrepairguy.com/terms-of-use/	
https://www.roofingrepairguy.com/disclaimer/	
https://www.roofingrepairguy.com/about-us/	
https://www.roofingrepairguy.com/privacy-policy/	
https://www.roofingrepairguy.com/testimonials-disclosure/	
https://www.roofingrepairguy.com/linking-policy/	
https://www.roofingrepairguy.com/contact-us/	

IMPORTANT**Images Missing Alt Text**

Images

5 pages

Alt text describes images to screen-reader users and to search engines (powering image search). Missing alt hurts accessibility and discoverability.

What to do: Add concise, descriptive alt attributes to meaningful images; use empty alt="" for purely decorative ones.

If left as-is: Accessibility failures and lost image-search traffic.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	1 of 4 images
https://www.roofingrepairguy.com/	1 of 1 images
http://www.roofingrepairguy.com/daly-ca/	1 of 4 images
https://www.roofingrepairguy.com/about-us/	2 of 2 images
https://www.roofingrepairguy.com/contact-us/	1 of 1 images

IMPORTANT**Missing H1**

Headings

3 pages

The H1 is the page's main on-page heading; it tells users and engines (and increasingly AI answer engines) what the page is about.

What to do: Add exactly one clear, descriptive <h1> that summarises the page's topic.

If left as-is: Weaker topical clarity for search and AI extraction.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	
https://www.roofingrepairguy.com/	
http://www.roofingrepairguy.com/daly-ca/	

IMPORTANT**Duplicate Meta Description**

Titles & Meta

2 pages

Reused descriptions across pages make snippets generic and signal thin differentiation to search engines.

What to do: Write a distinct description for each page.

If left as-is: Generic snippets and weaker differentiation.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	
http://www.roofingrepairguy.com/daly-ca/	

IMPORTANT**Duplicate Content**

Content

1 page

Two or more pages share near-identical content. Search engines must choose one to rank and may pick the wrong one, splitting signals across the duplicates.

What to do: Consolidate duplicates with 301 redirects or canonical tags, or differentiate the content so each page serves a distinct intent.

If left as-is: Diluted rankings and wasted crawl budget.

AFFECTED PAGE	DETAIL
http://www.roofingrepairguy.com/daly-ca/	Duplicate of https://www.roofingrepairguy.com/daly-ca/

IMPORTANT**HTTPS Page Links to HTTP**

Security

1 page

This secure page contains hyperlinks to plain-HTTP URLs. Every click sends the visitor (or crawler) through an insecure hop and usually a redirect, and internal HTTP links reintroduce the pre-HTTPS URL space.

What to do: Update the links to their HTTPS equivalents — internal links first, then external where the target supports HTTPS.

If left as-is: Needless redirects, insecure hops, and mixed signals about your canonical protocol.

AFFECTED PAGE**DETAIL**<https://www.roofingrepairguy.com/daly-ca/>

1 link(s) to HTTP URLs

IMPORTANT**Near-Duplicate Content**

Content

1 page

This page's text is nearly identical to another page — only boilerplate or a few words differ. Search engines cluster near-duplicates and typically rank just one, and thin variations (templated location/product pages) are a common quality-signal drag.

What to do: Consolidate the pages (301 or canonical), or differentiate them with genuinely distinct content that serves a distinct intent.

If left as-is: Only one of the variants ranks, and the duplication drags on site quality signals.

AFFECTED PAGE**DETAIL**<https://www.roofingrepairguy.com/contact-us/>≈93% similar to <https://www.roofingrepairguy.com/>**IMPORTANT****Not Served Over HTTPS**

Security

1 page

HTTPS is a confirmed ranking signal and a baseline trust requirement. Browsers flag HTTP pages as 'Not secure', scaring users away.

What to do: Install a TLS certificate and 301-redirect all HTTP URLs to their HTTPS equivalents site-wide.

If left as-is: Lower trust, browser warnings, and a ranking disadvantage.

AFFECTED PAGE**DETAIL**<http://www.roofingrepairguy.com/daly-ca/>

The favicon appears in browser tabs, bookmarks, and next to your result in Google's mobile SERPs. Without one you get a generic placeholder — a small but real branding and trust signal.

What to do: Add a `<link rel="icon">` in the `<head>` (ideally multiple sizes plus an apple-touch-icon).

If left as-is: A generic globe icon where your brand should be, including in search results.

AFFECTED PAGE	DETAIL

https://www.roofingrepairguy.com/contact-us/	

Without X-Content-Type-Options: nosniff, browsers may MIME-sniff responses and execute disguised content as script.

What to do: Send X-Content-Type-Options: nosniff on every response — it's a one-line server config.

If left as-is: MIME-sniffing attacks against your users become possible.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	
https://www.roofingrepairguy.com/	
https://www.roofingrepairguy.com/locations/	
https://www.roofingrepairguy.com/terms-of-use/

https://www.roofingrepairguy.com/testimonials-disclosure/	
https://www.roofingrepairguy.com/linking-policy/	
https://www.roofingrepairguy.com/contact-us/	

Without a CSP header, the browser will execute any script injected into the page — your main defence against XSS is missing.

What to do: Add a Content-Security-Policy header, starting with a report-only policy and tightening from there.

If left as-is: No browser-level protection against cross-site scripting.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	
https://www.roofingrepairguy.com/	
https://www.roofingrepairguy.com/locations/

https://www.roofingrepairguy.com/testimonials-disclosure/	
https://www.roofingrepairguy.com/linking-policy/	
https://www.roofingrepairguy.com/contact-us/	

Without a Referrer-Policy, browsers may send full URLs (including query parameters) to every site you link to, leaking paths, tokens, and user data.

What to do: Send Referrer-Policy: strict-origin-when-cross-origin (the modern default) or stricter.

If left as-is: URL data leaks to third-party sites in the Referer header.

AFFECTED PAGE	DETAIL

https://www.roofingrepairguy.com/contact-us/	

Resources loaded via `//host/path` inherit the page's protocol — a leftover from the HTTP era. They break when markup is reused in non-HTTP contexts (emails, `file://`) and mask the intended scheme.

What to do: Use explicit `https://` URLs for all resources.

If left as-is: Fragile resource loading with no upside on an all-HTTPS web.

AFFECTED PAGE	DETAIL

Slow server responses (high TTFB) hurt Core Web Vitals, frustrate users, and limit how many pages a crawler will fetch per visit.

What to do: Add caching/CDN, optimize database queries, enable keep-alive and compression, and move to faster hosting if needed.

If left as-is: Lower rankings via Core Web Vitals and reduced crawl coverage.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	2994 ms
https://www.roofingrepairguy.com/	4778 ms

Without HTTP Strict Transport Security, the first request can be downgraded to HTTP, exposing users to interception on that initial hop.

What to do: Send a Strict-Transport-Security header with a long max-age once you're confident all subdomains are HTTPS.

If left as-is: A small but real man-in-the-middle exposure window.

MINOR

Open Graph Missing Image

Social

8 pages

The page declares Open Graph tags but no og:image, so shares render as text-only cards — dramatically less clickable than image previews.

What to do: Add an og:image (1200×630 recommended) alongside the existing OG tags.

If left as-is: Text-only share cards that underperform in every feed.

AFFECTED PAGE

DETAIL

<https://www.roofingrepairguy.com/><https://www.roofingrepairguy.com/locations/><https://www.roofingrepairguy.com/terms-of-use/><https://www.roofingrepairguy.com/disclaimer/><https://www.roofingrepairguy.com/privacy-policy/><https://www.roofingrepairguy.com/testimonials-disclosure/><https://www.roofingrepairguy.com/linking-policy/><https://www.roofingrepairguy.com/contact-us/>

MINOR

GEO: Missing Authorship / E-E-A-T

Generative Engine Optimization

6 pages

Generative and traditional engines weigh experience, expertise, authoritativeness, and trust. Clear authorship and dates are strong trust signals.

What to do: Add a named author with credentials, a published/modified date, and author schema markup.

If left as-is: Reduced trust weighting and citation likelihood.

AFFECTED PAGE

DETAIL

<https://www.roofingrepairguy.com/><https://www.roofingrepairguy.com/locations/><https://www.roofingrepairguy.com/disclaimer/><https://www.roofingrepairguy.com/about-us/><https://www.roofingrepairguy.com/testimonials-disclosure/><https://www.roofingrepairguy.com/contact-us/>

AI engines cite substantive, self-contained passages. Very short pages rarely contain a citable, authoritative chunk.

What to do: Add depth: definitions, specifics, data, and self-contained explanations an engine can lift verbatim.

If left as-is: Little to quote means little chance of being referenced.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/	63 words
https://www.roofingrepairguy.com/locations/	70 words
https://www.roofingrepairguy.com/disclaimer/	274 words

https://www.roofingrepairguy.com/testimonials-disclosure/	133 words
https://www.roofingrepairguy.com/contact-us/	65 words

One or more images on this page exceed 100 KB. Heavy images are the most common cause of slow LCP and wasted mobile data.

What to do: Compress and resize images to their display size, serve next-gen formats (WebP/AVIF), and lazy-load below-the-fold images.

If left as-is: Slower loads, worse Core Web Vitals, higher bounce on slow connections.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	1 image(s); largest 201 KB — https://www.roofingrepairguy.com/wp-content/uploads/2019/02/Roof-Repair-Slider-Banner-Image-.png

MINOR

Low Text-to-HTML Ratio

Content

5 pages

A page that is mostly markup with little readable text often signals thin or template-heavy content to search and AI engines.

What to do: Increase the proportion of meaningful body text relative to code, and remove bloated markup.

If left as-is: Perceived as low-value, reducing ranking and citation.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/	1%
https://www.roofingrepairguy.com/locations/	1%
https://www.roofingrepairguy.com/about-us/	3%
https://www.roofingrepairguy.com/testimonials-disclosure/	3%
https://www.roofingrepairguy.com/contact-us/	1%

MINOR

Difficult to Read

Content

5 pages

The page scores as difficult on the Flesch reading-ease scale — long sentences and heavy vocabulary. Most web audiences (and featured-snippet extraction) favour clearer writing.

What to do: Shorten sentences, prefer common words, and break dense paragraphs into lists and subheadings.

If left as-is: Higher bounce rates and weaker snippet/AI-answer extraction.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	Flesch score 47
https://www.roofingrepairguy.com/terms-of-use/	Flesch score 34
http://www.roofingrepairguy.com/daly-ca/	Flesch score 47
https://www.roofingrepairguy.com/about-us/	Flesch score 42
https://www.roofingrepairguy.com/testimonials-disclosure/	Flesch score 41

MINOR

Thin Content

Content

5 pages

Pages with very little content rarely satisfy search intent and are easily out-competed. AI answer engines also skip pages that lack substance.

What to do: Expand the page with genuinely useful, original content that fully answers the user's question.

If left as-is: Weak rankings and low citation in AI answers.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/	63 words
https://www.roofingrepairguy.com/locations/	70 words
https://www.roofingrepairguy.com/about-us/	163 words
https://www.roofingrepairguy.com/testimonials-disclosure/	133 words
https://www.roofingrepairguy.com/contact-us/	65 words

MINOR

GEO: Not Answer-Ready

Generative Engine Optimization

3 pages

AI answer engines extract concise answers that sit directly under a clear heading. Pages that bury the answer in long prose are harder to quote.

What to do: Lead each section with the direct answer in the first sentence after the heading, then elaborate. Use question-style headings.

If left as-is: Passed over by AI engines in favour of more extractable competitors.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/	
https://www.roofingrepairguy.com/locations/	
https://www.roofingrepairguy.com/contact-us/	

MINOR

Empty Headings

Accessibility

2 pages

A heading element with no text gives screen-reader users a blank entry in the page outline and adds noise to the document structure engines parse.

What to do: Remove empty heading elements, or fill them with the section's actual heading text.

If left as-is: A confusing document outline for assistive tech (WCAG 1.3.1).

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/daly-ca/	2 heading(s)
http://www.roofingrepairguy.com/daly-ca/	2 heading(s)

MINOR

Very Difficult to Read

Content

2 pages

The page scores as very difficult to read — academic-paper territory. Unless your audience expects that register, most visitors will struggle.

What to do: Rewrite for clarity: one idea per sentence, concrete words, structural aids like lists and examples.

If left as-is: Content most visitors give up on, and engines struggle to excerpt.

AFFECTED PAGE	DETAIL
https://www.roofingrepairguy.com/disclaimer/	Flesch score 26
https://www.roofingrepairguy.com/privacy-policy/	Flesch score 18

MINOR

Canonicalised

Canonicals

1 page

This page's canonical points to a different URL, so engines treat the other URL as the one to index. Fine when deliberate, harmful when accidental.

What to do: Verify the canonical target is correct. If this page should rank on its own, point the canonical at itself.

If left as-is: The page may be dropped from the index in favour of the canonical target.

AFFECTED PAGE	DETAIL
http://www.roofingrepairguy.com/daly-ca/	https://www.roofingrepairguy.com/daly-ca/

MINOR

No llms.txt

Generative Engine Optimization

1 page

An /llms.txt file is an emerging standard that tells AI engines which content matters most and how to use it — the robots.txt of the generative-search era. Sites that publish one make it easier for assistants to find and cite the right pages.

What to do: Add an /llms.txt at your site root: a short Markdown file listing your key pages and a one-line description of the site, with links to the most important content (and optionally full-text .md versions).

If left as-is: AI engines have to guess your most important content instead of being told.
